SUMMARY

Backend engineer with 4+ years of Ruby on Rails in production at BrowserStack and Procol. At BrowserStack I ship LLM agents and own their reliability: evals, rollouts, Kafka, Kubernetes. On the side I build developer tools in Rust, including [Vortex](#) (700+ GitHub stars, in [Homebrew core](#)), and contribute upstream to [Grafana Tempo](#) and [Lima](#).

EXPERIENCE

BrowserStack

Dec 2024 – Present

Senior Software Engineer, Backend (AI)

Mumbai, India

- Built BrowserStack's [AI accessibility agents](#) (issue detection, remediation, design color contrast) on the Spectra rule engine, covering **40+ WCAG criteria** across web, mobile and design.
- Designed multi-provider **LLM inference pipelines** (Gemini, GPT-4, Claude) with semantic DOM chunking for parallel page analysis: **87.7% heading-detection accuracy**, **~80% less manual review** for color contrast.
- Cut **false positives 64%** and **P90 latency from 20s to 10.1s** on the mobile reading-order agent across 4 LLMs.
- Built a **test-case generation agent** (LangGraph); set up **Langfuse evals** tracking accuracy, drift and false positives.
- Owned observability for **7 AI features**; shipped Redis-backed percentage rollouts and autoscaled Kafka consumers on K8s.
- Resolved **15+ P1/P2 incidents** (OOM loops, Kafka lag, LLM 429s); moved inference to Vertex AI provisioned throughput.

Procol

Jun 2022 – Dec 2024

Senior Software Engineer

Gurgaon, India

- Led a team of 3** to turn one-off SAP and Oracle ERP integrations into a paid add-on that **raised the per-customer contract price 25%** and won enterprise clients.
- Designed the **form system used as the core data layer** across Procol's microservices, integrated with 3 core services.
- Built **Flexi**, Notion-style configurable data sources and views that replaced custom development for customer requests.
- Introduced RSpec (**0 to 52% test coverage**); drove architecture and quality decisions; helped upgrade to Rails 7.

HashedIn by Deloitte

Jan 2022 – Jun 2022

SDE Intern

Bangalore, India

- Built REST APIs with JWT auth for a parking management system (Django REST Framework, PostgreSQL).

PROJECTS

- Vortex** | *Rust, Ratatui* github.com/Harry-kp/vortex
700+ stars, 6k+ downloads, in [Homebrew core](#). WireGuard/OpenVPN terminal UI with live telemetry and leak detection; its animation widget ships separately as [ratatui-flip-panel](#) (3k+ downloads).
- approval_engine** | *Ruby on Rails, PostgreSQL* rubygems.org/gems/approval_engine
Multi-step approvals for Rails: audit ledger, JSON Logic routing without deploys, transactional outbox, SLA timeouts.
- kitz** | *Rust, Kafka, AWS* github.com/Harry-kp/kitz
AWS MSK Kafka terminal UI with native IAM auth (SigV4), environment hot-switching, live topic and group views.
- Mercury** | *Rust* github.com/Harry-kp/mercury
Keyboard-first Postman alternative: 5 MB binary, 50 ms startup, 60 fps UI; requests are plain-text files you keep in git.
- UPPCL Pro** | *React Native, FastAPI* github.com/Harry-kp/uppcl-pro-app
Reverse-engineered an undocumented, encrypted smart-meter API; bilingual Android app with bill pay and forecasting.

OPEN SOURCE

Merged PRs to [Grafana Tempo](#) (block builder honors global storage config), [Lima](#) (`limactl create --name fix`), [CocoIndex](#) (configurable LMDB limits), [Maybe Finance](#) (4) and [Ruby for Good](#) (2).

SKILLS

Languages: Ruby, Rust, Python, TypeScript, SQL

AI / LLM: LangGraph, LangChain, Langfuse evals, RAG, vector DBs, Vertex AI, OpenAI / Gemini / Claude APIs

Infra: Kubernetes, Docker, Kafka, Redis, PostgreSQL, AWS, GCP, BigQuery, Prometheus, Grafana

Frameworks: Ruby on Rails, Sidekiq, FastAPI, Node.js, Next.js, Tauri, React Native

EDUCATION

B.Tech, Computer Science, AKGEC (AKTU), Ghaziabad, India

2018 – 2022
